The Changing Nature of Work Feb 18 2022 Although there is great debate about how work is changing, there is a clear consensus that changes are fundamental and ongoing. The Changing Nature of Work examines the evidence for change in the world of work. The committee provides a clearly illustrated framework for understanding changes in work and these implications for analyzing the structure of occupations in both the civilian and military sectors. This volume explores the increasing demographic diversity of the workforce, the fluidity of boundaries between lines of work, the interdependent choices for how work is structured-and ultimately, the need for an integrated systematic approach to understanding how work is changing. The book offers a rich array of data and highlighted examples on: Markets, technology, and many other external conditions affecting the nature of work. Research findings on American workers and how they feel about work. Downsizing and the trend toward flatter organizational hierarchies. Autonomy, complexity, and other aspects of work structure. The committee reviews the evolution of occupational analysis and examines the effectiveness of the latest systems in characterizing current and projected changes in civilian and military work. The occupational structure and changing work requirements in the Army are presented as a case study.

Functional Assessment for Adults with Disabilities Apr 30 2020 The U.S. Social Security Administration (SSA) provides disability benefits through the Social Security Disability Insurance (SSDI) and Supplemental Security Income (SSI) programs. To receive SSDI or SSI disability benefits, an individual must meet the statutory definition of disability, which is "the inability to engage in any substantial gainful activity [SGA] by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months." SSA uses a five-step sequential process to determine whether an adult applicant meets this definition. Functional Assessment for Adults with Disabilities examines ways to collect information about an individual's physical and mental (cognitive and noncognitive) functional abilities relevant to work requirements. This report discusses the types of information that support findings of limitations in functional abilities relevant to work requirements, and provides findings and conclusions regarding the collection of information and assessment of functional abilities relevant to work requirements.

An Occupational Information System for the 21st Century Oct 29 2022 The Occupational Titles has been relied on for the description of jobs and workforce development. However, as global competition and technological change has created a new world of work, the Department of Labor realized that a more flexible and precise system for chronicling work-related information was needed. Thus, the O*NET, or the occupational information network, was launched. Written by the developers of the O*NET system, this edited volume describes the research and methodology used in the design and development of this ground-breaking system. The O*NET is intended to provide a framework for describing jobs in terms that are capable of addressing the needs of workers and employers into the 21st Century. Instead of relying on rigid task descriptions, the O*NET uses domains of worker and occupation characteristics -- such as abilities, work styles, generalized work activities and work context -- to describe each job. This volume details each of the main domains used by the O*NET. It outlines how each was quantified and provides statistical analyses about its applications, internal relationships, and structure. The volume also places the O*NET system in its historical research context and describes how this innovative new system can support the creation of jobs tailored for the new economy. This volume will be invaluable for those needing to familiarize themselves with this powerful new human resource tool. It will be of particular interest to industrial/organizational psychologists, human factors specialists, counseling psychologists, vocational counselors, rehabilitation counselors, industrial engineers, occupational professionals, and labor market analysts.

Work, Jobs, and Occupations Jan 20 2022 Various editions of the Dictionary of Occupational Titles have served as the Employment Service's basic tool for matching workers and jobs. The Dictionary of Occupational Titles has also played an important role in establishing skill and training requirements and developing Employment Service testing batteries for specific occupations. However, the role of the Dictionary of Occupational Titles has been called into question as a result of planned changes in the operation of the Employment Service. A plan to automate the operations of Employment Service offices using a descriptive system of occupational keywords rather than occupational titles has led to a claim that a dictionary of occupational titles and the occupational research program that produces it are outmoded. Since the automated keyword system does not rely explicitly on defined occupational titles, it is claimed that the new system would reduce costs by eliminating the need for a research program to supply the occupational definitions. In light of these considerations, the present volume evaluates the future need for the Dictionary of Occupational Titles.

Occupational Information System (OIS) Handbook Nov 29 2022

A Database for a Changing Economy Mar 22 2022 Information about the characteristics of jobs and the individuals who fill them is valuable for career guidance, reemployment counseling, workforce development, human resource management, and other purposes. To meet these needs, the U.S. Department of Labor (DOL) in 1998 launched the Occupational Information Network (O*NET), which consists of a content model-a framework for organizing occupational data-and an electronic database. The O*NET content model includes hundreds of descriptors of work and workers organized into domains, such as skills, knowledge, and work activities. Data are collected using a classification system that organizes job titles into 1,102

occupations. The National Center for O*NET Development (the O*NET Center) continually collects data related to these occupations. In 2008, DOL requested the National Academies to review O*NET and consider its future directions. In response, the present volume inventories and evaluates the uses of O*NET; explores the linkage of O*NET with the Standard Occupational Classification System and other data sets; and identifies ways to improve O*NET, particularly in the areas of cost-effectiveness, efficiency, and currency.
